Profile

Full-stack Developer with 3 years of experience delivering enterprise web applications and AI-powered systems. Specialized in scalable backend architecture, real-time communication, and modern frontend development. Strong collaborator within cross-functional teams, contributing to HR systems, financial platforms, and AI-driven monitoring solutions from design to production deployment.

Core stack: TypeScript, React, NestJS, Python, Django, PostgreSQL/MySQL, MongoDB.

Employment History

AI Patient Safety & Smart Hospital Platform

Jan 2025 – Present Enigco

- Serving as Technical Lead in a 3-member startup team
- Developed AI-based action recognition models to detect seizures, falls, and abnormal patient behaviors from live camera feeds
- Designed and implemented RESTful APIs using FastAPI for real-time alerting and video data management
- Built monitoring dashboard with React & TypeScript for medical staff notifications and evidence tracking
- Currently preparing product demo for investor pitching

Tech Stack: Python | FastAPI | PostgreSQL | React | TypeScript

E-commerce Website for a Japanese Supermarket

Aug 2024 – Mar 2025 Freelance

- Developed frontend for customer and admin systems in a 3-member team
- Implemented product listing, cart, online payment, and admin management features
- Integrated frontend with Laravel-based backend APIs
- Deployed and maintained production system on Hostinger

Tech Stack: React | TypeScript

Driver Behavior Detection System – Joint Project with MIT Research Lab

Jan 2025 – Present Enclave

- Analyzed and processed data collected from in-vehicle devices (e.g., cameras, GPS systems).
- Built and maintained data pipelines to clean, transform, and store data in databases.
- Utilized processed datasets to design, train, and improve AI models for driver behavior analysis and detection.

Tech Stack: Python | PostgreSQL

Languages

English

Hobbies

Badminton, Arts

Chatbot Module for Financial Management System – Alameda County Probation Department

Jun 2024 – Aug 2025  Enclave

- Developed backend APIs for an AI-powered chatbot within a 12-member team
- Built RESTful services using Django for conversation handling and secure MySQL data retrieval
- Fine-tuned Rasa NLP models (intent classification & entity recognition) and implemented custom action servers
- Deployed and configured production services using Apache2

Tech Stack: Python | Django | MySQL | Rasa | Apache2

360° Performance Review System

Mar 2023 – Dec 2023  Enclave

- Built 360° Performance Review module in a sub-team of 4 (within 8-member team)
- Implemented multi-role evaluation workflows and structured review lifecycle management
- Developed real-time reviewer notifications using WebSocket
- Built frontend with React & TypeScript and backend services with NestJS & MongoDB

Tech Stack: TypeScript | React | NestJS | MongoDB | WebSocket

NGO Management System

Jul 2022 – Feb 2023  Enclave

- Maintained and enhanced a web-based NGO management system in a 3-member team
- Resolved legacy issues and implemented new features for employee and organizational management
- Contributed to both backend and frontend development

Tech Stack: PHP | JavaScript | HTML/CSS | SQL Server

Education

Da Nang University of Science and Technology, Bachelor of Engineering in Information Technology

2018 – 2024  Da Nang
